

Flexible Flap Discs

'Accesser' Gets the Corners Competitors Can't Touch

Millennium Series Flexible Disc

- **Flexible flap disc combines a unique flexible flap design with specially selected abrasive cloths to perform applications that are difficult for conventional forms of coated abrasives and rigid forms of flap discs.**
- **Totally adaptable to contoured and irregular surfaces.**
- **Pointed flap configuration is excellent for accessing tight 90° corners and hard-to-reach areas.**
- Consistent performance throughout disc life.
- Flap construction virtually eliminates edge wear.
- DCT Flap discs are made from the highest quality Zirconia Aluminum.
- Built for durability and can be run at high RPM's and withstand heavy pressure.
- All metal surfaces include stainless steel and titanium alloy.
- Fiberglass back helps prevent nicks in the grinding surface when disc wears; unlike competitive brands made of aluminum which may mar the surface.
- Available in standard and spin-on arbor.

Remove burrs, ripples, swags, and edges from materials while creating a finished surface.

Unique construction virtually eliminates edge wear.

Maintains consistent performance.

Flexible design enables disc to easily get into tight 90° corners as shown with I-beam at left and below.

Flexible Flap Disc makes a perfect handheld grinder.

Photo below shows I-Beam after 60 seconds of grinding.
