

MASTIC RUBBER TAPE

Seals, insulates and protects electrical splices and connections

Mastic Rubber Tape is thick rubber based, pressure-sensitive adhesive. It is ideal for insulating and moisture-sealing splices and terminations on solid electric cable. Use with an all-weather vinyl electrical tape for optimum performance when buried, submerged underwater, or in continuous exposure to moisture or chemicals.

- Provides superior adhesion, moisture and chemical resistance
- Provides maximum performance in extreme conditions when used with an all-weather vinyl electrical tape
- Easily wraps, stretches and molds around irregular shapes
- Forms a tight seal from -63°F to 180°F
- Won't sag on vertical surfaces
- Protects against alkalis, acid and copper corrosion
- Resistant to salt spray, sunlight, oil and grease
- Insulates, pads and moisture-seals all connections up to 600 volts
- Provides insulation build up, water sealing and surface protection
- No shrinking or cracking-remains flexible
- Paintable-latex based only
- Indoor / outdoor use

Applications

- Cellular tower electrical splices
- Bolted connections
- Service drops
- Traffic signal wire connections
- Lighting connections
- Transformer bushing protection
- Padding bolted connections on bus bar
- Grounding rod connection protection
- Terminal protection
- Cable end sealing
- Secondary compression connections
- Irregular joints
- Filling gaps between cables and joints
- Junction boxes
- Gutters
- Cable trays
- And more

Industries

- Electricians
- Maintenance
- Automotive
- Marine
- Other Skilled Professionals
