

LONG BOY HIGH SPEED DRILLS

Manufactured to exacting standards that chip clean holes over and over again.

The Long Boy Drill is constructed from High Speed Steel (HSS) with a relieved flute along its length to reduce heat and friction, increasing the life of your drill. These bits are manufactured to exacting standards that chip clean holes over and over again.

Long Boy High Speed Drills are designed for general purpose drilling in a wide range of materials in deep hole applications where a maximum 9" flute length is required. Drills can be used on metal, wood and light masonry like clay bricks.

** Drills larger than 1/2" diameter do not have a reduced shank. The diameter size of the drill will have the same shank size, preventing it from fitting most portable drills. Larger sized reduced shanks are available upon request.*

- 118 Degree Point
- 12" Overall Length
- 9" Flute Length
- Straight Shank
- High Speed Steel

*** Long Boy High Speed Drills are sold individually.**
