

BI-METAL TRIPLE TOOTH HACK SAW BLADES

Take advantage of maximum cutting efficiency with three tooth pitches in one blade.

Use the 32 tpi lead edge for quicker starts with less thrust and less "walking."

The 24 tpi middle section increases cutting efficiency while preparing for the 18 tpi stage.

Complete the stroke with 18 tpi - the more aggressive and faster cutting edge.

The Morse Triple Tooth blade has precision milled, high speed teeth with 8% Cobalt resulting in superior cutting performance in a wide variety of materials. Effortlessly cuts wood, plastic or any machinable metal, including conduit, stainless steel tubing, angle iron, copper tubing, structural materials and more.
