

COMBO ADJUSTABLE PIPE WRENCH SET

Unique reversible jaw adds gripping features with an adjustable wrench.

- Ergonomically shaped thermoplastic handle provides extra comfort and less slippage
- Measurement scale on head conveniently identifies the size of the fastener
- Slim head with tapered jaws combine accessibility and extra turning strength
- Aggressively angled teeth provide increased torque for maximum gripping power
- Wide grooves and coarse knurls allow smooth adjustment
- Can change the grip by reversing jaw
- Both jaws are precision-hardened to handle equal amount of force in either direction
- Anti-corrosion treated
- Ideal for plumbers, electricians, maintenance workers and more

The First Scientific Approach to Tool Design

Back in the early 1980's, BAHCO became one of the first toolmakers in the world to institute a scientific approach to designing ergonomic tools. The BAHCO11-Point Ergonomic Design Program starts with end user research, their tasks and the limitations of the tools they currently use. Their research has revealed that comfort and ease of operation are a tool's two most important characteristics. These tools are designed to reduce fatigue, cramping and injuries. BAHCO tools help prevent long-term repetitive motion injuries by minimizing skeletal and neuromuscular strains.
