

# GRIP-ON PLUGWELD LOCKING PLIERS

## Saves time and increases productivity.

The solid copper pad on the fixed jaw solves the problem of burn through when welding thin sheet metal panels. Spatter resistant copper enables the filling of pilot holes. Saves time and increases productivity in the body repair shop.

- Copper alloy pad behind plugweld prevents burn through
- Weld does not stick to copper alloy which also allows for quick cooling
- Allows for higher heat range for better penetration
- U-shaped bottom jaw provides even pressure around welding spot.
