

ZIP-OUTS™

Hearing protection in your hard hat.

The innovative design of Zip-Outs™ uses a unique zipper tethering system that installs quickly and easily into any hard hat or bump cap. The “zip out/zip in” tethering system guarantees that ear plugs are always within easy reach of the wearer, available when needed and out of the way when not needed.

Available in DuraFoam™ and PermaPlug™ styles, the Noise Reduction Rated ear plugs meet all OSHA and ANSI requirements. Both types are designed to allow easy removal of ear plugs for replacement and cleaning.

DuraFoam ear plugs are designed for optimal compliance and increased comfort. The special foam is formulated for softness, with a smooth outer surface that won't irritate the ear canal. The bright orange color makes for easy compliance checks. DuraFoam plugs have a Noise Reduction Rating of 31.

PermaPlug™ ear plugs are washable and reusable. They utilize a four-flange design that provides maximum comfort over extended periods of wear, and their bright blue color facilitates easy compliance checks. Featuring a Noise Reduction Rating of 26, they have been independently tested in an accredited laboratory to meet ANSI S3.19-1974.
